

15.3.6 Lab: Configure NTFS Permissions

null

Candidate: omar santiago (osantiago162@gmail.com)**Time Spent:** 08:39**Score:** 100%

Task Summary

Required Actions

-
- ✓ Edit permissions for the D:\Day Data folder [Show Details](#)
 - ✓ Edit permissions for the D:\Night Data folder [Show Details](#)
-

Explanation

While completing this lab, use the following information:

- Turn off permissions inheritance for **D:\Day Data** and **D:\Night Data**.
- Groups: **DayGroup** and **NightGroup**

Complete this lab as follows:

1. Turn off permissions inheritance.
 - a. From the taskbar, select **File Explorer**.
 - b. Maximize the window for better viewing.
 - c. From the left pane, expand and select **This PC > Data (D:)**.
 - d. Right-click the **folder** whose permissions you want to modify and select **Properties**.
 - e. Select the **Security** tab.
 - f. Select **Advanced**.
 - g. Select **Disable inheritance**.
 - h. Select **Convert inherited permissions into explicit permissions on this object**.
2. Remove the Users group from the *Permission entries* list (ACL).
 - a. Select **Users**.
 - b. Select **Remove**.
 - c. Select **OK**.
3. Add the appropriate group to the folder's security (ACL).
 - a. From the Properties dialog, select **Edit**.
 - b. Select **Add**.
 - c. Enter the **name** of the group you want to add.
 - d. Select **OK**.
4. Assign Full Control over each folder to the appropriate group.
 - a. With the **group** highlighted, under the Allow column, select **Full Control**.
 - b. Select **OK** to close the Permissions window.

- c. Select **OK** to close the Properties window.
- 5. Repeat steps 1d–4 to modify the permissions for each additional folder.
