

12.4.6 Lab: Create Azure Storage Account

null

Candidate: omar santiago (osantiago162@gmail.com)**Time Spent:** 13:00**Score:** 100%

Task Summary

Required Actions

✓ Create a Storage Account [Show Details](#)

✓ Create a file share: corpnetfileshare

Explanation

Complete this lab as follows:

1. Create a storage account.
 - a. In the Azure portal, select **Storage accounts** under Azure Services.
 - b. Select **+Create**.
 - c. From the *Create a storage account* page, configure the following options:
 - Subscription: **CorpNet Production**
 - Resource group: **CorpNetCloud**
 - Storage account name: **corpnetstorageaccount**
 - Region: **(US) West US2**
 - Redundancy: **Geo-redundant storage (GRS)**
 - d. Select **Review**.
 - e. Review the options and then select **Create**.
 - f. When the deployment is complete, select **Go to resource**.
2. Create a File Share.
 - a. From within the new storage account, in the left navigation pane, under *Data Storage*, select **File shares**.
 - b. From the top row, select **+File share**.
 - c. In the Name field, enter **corpnetfileshare** as the name of the new file share.
 - d. Select **Create**.
 - e. Select the new file share (**corpnetfileshare**).

There are currently no files in this share.

After you create a sync group, register the on-premise server, and create the server endpoint, you will come back to this location and view the files that have synced to the storage account from the on-premise server.
