

18.3.2 Lab: SOHO Router Configuration

null

Candidate: omar santiago (osantiago162@gmail.com)**Time Spent:** 09:16**Score:** 100%

Task Summary

Required Actions and Questions

✓ Q1: Which network is Home-PC1 on, based on the IP address?

Your answer: 192.168.1.0

Correct answer: 192.168.1.0

✓ Q2: Which DNS address was assigned to this computer?

Your answer: 192.168.1.1

Correct answer: 192.168.1.1

✓ Ping the Gateway

✓ Home-PC1 connected to the Internet router

Explanation

Complete this lab as follows:

1. Add the computers to the canvas
 - a. In the tools tray, select the **End Devices** icon.
 - b. Drag all three computers to the modeler canvas.
2. Add the switch to the canvas
 - a. In the tools tray, select the **Switches** icon.
 - b. Drag the switch to the modeler canvas.
3. Add the router to the canvas
 - a. In the tools tray, select the **Routers** icon.
 - b. Drag the router to the modeler canvas.
4. Connect the switch to the router
 - a. In the tools tray, select the **Create Link** icon.
 - b. Click on the **Router** and select **Router Port 0**.
 - c. Click on the switch and select an open port.
5. Connect the computers to the switch
 - a. In the tools tray, make sure the **Create Link** icon is selected.

- b. Click on **Home-PC1** and select the **Ethernet** port.
 - c. Click on the **Switch** and select an open port.
 - d. Click on **Home-PC2** and select the **Ethernet** port.
 - e. Click on the switch and select an open port.
 - f. Click on **Home-Laptop** and select the **Ethernet** port.
 - g. Click on the switch and select an open port.
 - h. Select **Create Link** to end the link tool.
6. Verify that a DHCP address is assigned
- a. Right-click **Home-PC1** and select **Launch Windows**.
 - b. In the system tray, right-click the network icon and select **Network and Internet settings**.
 - c. Select **Ethernet** and scroll down to the assigned IP address.
 - d. Select **Questions** and answer the questions.
 - e. Minimize the Lab Questions dialog.

If the network is still not showing a proper connection, restart the Home-PC1 computer.
This will force the computer to request an updated IP address from the router.

7. Verify connectivity by pinging the gateway
- a. Right-click **Start** and select **Terminal (Admin)**.
 - b. In the terminal window, type **ping 192.168.1.1**.
 - c. Press **Enter**.
